

## LESSON PLAN

Type	Code	SOFTWARE ENGINEERING	L-T-P	Credits	Marks
CS	CC-11		3-1-0	4	100
<b>Topic Objective</b>	Understand units of measure common to computer systems. Appreciate the evolution of computers. Understand the computer as a layered system. Be able to explain the von Neumann architecture and the function of basic computer components.				
<b>Prerequisites</b>	Knowledge of basic computer science concepts such as data structures, algorithms, and programming languages is essential. This forms the foundation upon which computer architecture is built.				
<b>Lecture Scheme</b>	Regular lectures (classroom /virtual class with Laptop/Desktop/Smartphone) with use of ICT, lectures are planned to be interactive with focus on problem solving activities.				

### Evaluation Scheme

Internal Assessment			Written Assessment	Total
Assignment(s)	Unit Test	Mid-Term (Written)	End-Term

### University Syllabus

Unit No	Topics	Hours
Unit-1	Professional Software Development, Software Engineering Ethics, Software Processes, Software Process Models, Process Activities, Coping with Change, The Rational Unified Process, Agile Software Development, Agile Methods, Plan-Driven and Agile Development, Extreme Programming, Agile Project Management, Scaling Agile Methods.	10
Unit-2	Requirements Engineering, Functional and Non-Functional Requirements, The Software Requirements Document, Requirements Specification, Requirements Engineering Processes, Requirements Elicitation and Analysis, Requirements Validation, Requirements Management, System Modelling, Context Models, Interaction Models, Structural Models, Behavioural Models, Model-Driven, Engineering, Architectural Design, Architectural Design Decisions, Architectural Views, Architectural Patterns, Application Architectures.	10
Unit-3	Design and Implementation: Object-Oriented Design using the UML, Design Patterns, Implementation Issues, Open Source Development, Software Testing: Development Testing, Test-Driven Development, Release Testing, User Testing, Software Evolution: Evolution Processes, Program Evolution Dynamics, Software Maintenance, Legacy System Management, Dependability and Security.	10
Unit-4	Socio-technical Systems: Complex Systems, Systems Engineering, System Procurement, System Development, System Operation. Dependability and Security: Dependability Properties, Availability and Reliability, Safety, Security. Dependability and Security Specification: Risk-Driven Requirements, Specification, Safety Specification, Reliability Specification, Security, Specification, Formal Specification.	

Unit-5	Dependability Engineering: Redundancy and Diversity, Dependable Processes, Dependable Systems Architectures, Dependable Programming. Security Engineering: Security Risk Management, Design for Security, System Survivability. Dependability and Security Assurance: Static Analysis, Reliability Testing, Security Testing, Process Assurance, Safety and Dependability Cases.	10
	Total (Hours)	40

## LESSON PLAN

Type	Code	ASP.NET	L-T-P	Credits	Marks
CS	DSE-2			3-1-0	4
<b>Topic Objective</b>	To learn about basic features of ASP.NET and its controls To create an ASP.NET application using standard .NET Controls .To learn about connecting data sources using ADO.NET and managing them.				
<b>Prerequisites</b>	Basic knowledge of C#, HTML, Visual Studio, and Object Oriented Programming is required.				
<b>Lecture Scheme</b>	Regular lectures (classroom/virtual class with computer/Smartphone) with use of ICT as and when required, lectures are planned to be interactive with focus on problem solving activities.
